# DSA LAB Assignment

Name

M. Awaiz

Reg #

SP22 - BCS - 041

Section

A

## 1) Insertion in BST:

Illustration:

Step # 1 comparing with root node

Step # 2 compare with left child root

Day: \_\_\_\_\_

Date: \_\_\_\_\_

step # 3 comparing with child root 30

 $40 > 30$ 

goto right

step # 4 insert item as it is leaf node

## Deletion in BST:

case 1 Delete leaf node.

! Delete 20

compare

 $x < 50$  &  $x \neq 50$ 

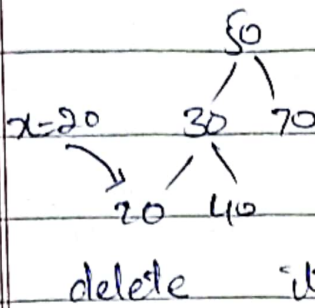

goto left

4 $x < 30$  &  $x \neq 30$ 

goto left

Day: \_\_\_\_\_

Date: \_\_\_\_\_

iiiiv

**Case II** Delete node with single <sup>child</sup> BST.

i Delete (70)

replacing 70 with 80.

ii goto 70 node and delete it.

Day: \_\_\_\_\_

Date: \_\_\_\_\_

**Case III** delete node with both children.

1 delete (50)

compare 50 goto right

compare with 70

$50 < 70$

goto left

compare with 60

60 is leaf node

swap 50 with 60

now delete 50

Day: \_\_\_\_\_

Date: \_\_\_\_\_

# Searching in BST

key is  $x = 40$

goto root

$x \neq \text{root}$  &  $x < \text{root}$

goto left

$x \neq \text{root}$  &  $x > \text{root}$

goto right

$x == \text{root}$

key found

Day: \_\_\_\_\_

Date: \_\_\_\_\_

## Preorder Traverse in BST

20 is root again print (10)

$\Rightarrow$  40 is left and leaf print (40)

$\Rightarrow$  goto right

goto right of parent

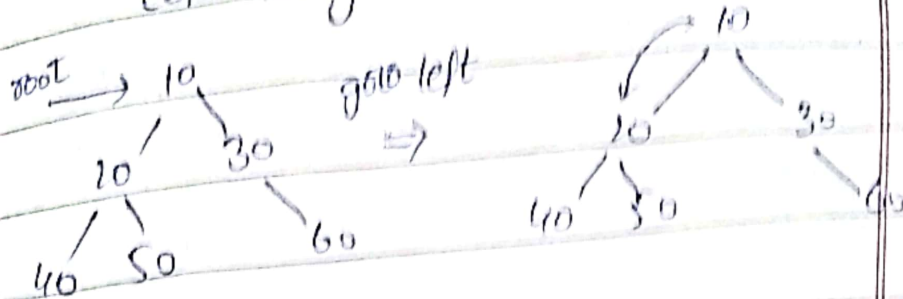

There is not left of 30 goto right

# Post order in BST

Left  $\rightarrow$  Right  $\rightarrow$  Root

20 is root of subtree goto left.

now goto right of subtree

go back to root of subtree.

goto right

Day: \_\_\_\_\_

Date: \_\_\_\_\_

## Inorder in BST

Left  $\rightarrow$  root  $\rightarrow$  right

goto root of subtree

goto right of subtree

goto to root of tree

goto right of tree

Left is NULL  
goto root

B

Day: \_\_\_\_\_

Date: \_\_\_\_\_

goto right of subtree

 $40 \rightarrow 20 \rightarrow 50 \rightarrow 10 \rightarrow 30 \rightarrow 60$
